

A Patio for Those on the Go

(June 2005, Charlotte, Michigan) The Portable Patio© is an innovative system of large, plastic tiles that interlock without the use of tools to form a stable, dry and attractive outdoor deck of virtually any size. The tiles can be assembled quickly and easily yet can be stored in a compact space using the convenient storage tote bag. Use the Portable Patio© to enhance your outdoor living space while adding a touch of practical elegance at the same time.

The tiles are 2-feet square, 1-inch thick, weigh 3 lbs each, and are made from a tough, durable and stain-proof material similar to that used for pick-up bed liners. The tiles are available in either glacier grey or desert tan color and have a non-skid textured surface. They will not absorb moisture, odor or dirt. To clean, simply sweep or hose off.

A large, water-resistant tote bag is provided for storage with each Portable Patio©. The attractive, slate-grey tote bag holds up to eight platforms and weighs less than 26 pounds when full. The tough water-proof tote is made from PVC-coated 600 denier polyester material. You can store tiles when wet or dirty and not create a mess inside your coach or RV. The tote can be cleaned by simply hosing it out and left open to dry.

When it comes to an outdoor deck, who said you can't take it with you? With a Portable Patio© you can! The patio assembles in only minutes so it is easy to use while on the go. Use the patio under awnings, screened porches or "under the stars". Keep mud and dirt from being tracked inside your rig. Tough enough for chairs, tables and other outdoor furniture. Upscale your outdoor living experience easily, quickly and affordably.
